To Whom It May Concern:

Clayton Ousley had taken my WEB110, WEB210 and WEB230 courses. He did very well in all courses. However, it was the WEB230 (advanced JavaScript) course in which he really shined.

WEB230 is a very demanding course that introduces students to the MEAN (Mongo, Express, Angular, Node) stack along with front end JavaScript. In the course that Clayton took he was required to build a shopping cart application including both the user and admin side. This required him to write all front-end HTML, CSS and Javascript along with the backend Javascript using Node.js. He also had to create and manage a Mongo Database and create the web server. Additionally this project required him to write the application using the MVC architecture and on a Unix platform.

Clayton is very knowledgeable in Linux and he was the only student that preferred and used a Linux distribution instead of a PC or MAC operating system for his personal computer. From what I understand, he had mostly taught himself.

One of Clayton's best traits, which cannot be taught, is he is a very respectful and polite person who is not afraid to work hard. His class attendance and participation was excellent.

I would highly recommend Clayton for any position for which he is qualified.

If I can provide any additional information regarding Clayton, please contact me at sshaper@wccnet.edu.

Sincerely,

Scott Shaper
